Lab0: Exploratory Data Analysis

CPSC429/529 Machine Learning

In this lab assignment, you are given a breast cancer dataset (`breast_cancer.csv`) and do exploratory data analysis. Briefly, you will do the followings:

1. Load the data into a dataframe, and look at the data using dataframe methods;

2. Do the data processing such as dropping columns, and constructing feature matrix and target column;

3. Visualize data using plots such as histogram and pairplot.

You can find more detailed instructions in the jupyter notebook (`Lab0.ipynb`).
